

# Cybersecurity Awareness Training

**95% of all successful cyber attacks are caused by human error.**  
**Educating employees about common cyber threats can protect your organization and minimize risks.**

**1 in 5 Small Businesses will suffer a cyber breach this year. This training program will provide the essential knowledge and skills to help users avoid cyber incidents and strengthen the overall cybersecurity culture in the workplace.**

## On-Going Cybersecurity Training Includes:

- E-Learning with current and continually expanding relevant content
- Sophisticated real-world phishing simulator to test employee awareness
- Live in person training on security best practices
- Management tracking and reporting of training and phishing campaigns
- Ability to launch and manage campaigns to multiple sites

## Why It's Important:

- Security is a layered approach and the human layer is the weakest link
- Social Engineering attacks have overtaken malware as the preferred method of compromising data by cybercriminals
- Confident employees empowered through training and established security protocols are less likely to make mistakes that may allow a data breach
- Prevent downtime and lost revenue by adopting a proactive approach to security training

## Value of Customized Training:

- An ongoing training program is consistent and effective, rather than a one-time teach out
- Training is continuously updated and expanded to match the current cyber threat landscape
- Simulations allow employees to practice safe online behavior and help reinforce the training and improve effectiveness
- Customized program designed for your users covering:
  - Phishing and Social Engineering
  - Access, Passwords and Connection
  - Device Security
  - Physical Security
