

Safer Workplaces - Now and For the Future

Safeguard the well-being of your employees, the public, and the environment in real time.

PPE Detection

Establish and maintain a culture of safety with **visual cameras** and smart **analytics** that confirm the presence (or absence) of required personal protective equipment. Integrating PPE detection with network **horn speakers** allows workplaces to issue correctional messaging – and linking it to an **access control system** can prevent site access without proper PPE.

Man down

Mitigate risk in lone-worker scenarios and respond swiftly to incidents in any high-risk areas, using a **visual camera** with intelligent **analytics** to help monitor the working environment for slips, falls, or collapses.

Keep restricted areas clear

Help prevent incidents and accidents in restricted areas and confined spaces. A **visual camera** with **analytics** can trigger automatic equipment shutdowns and warn operators when it detects a person within a predetermined risk zone. Warning messages and alarms can be issued via **horn speakers**.

Early fire prevention

Support fire prevention with early recognition of smoke and fire, using **analytics** in a **visual camera**. Immediate situational overview allows for prompt appropriate action.

Leak detection

Support staff safety and environmental compliance by monitoring pipes, tanks, and equipment for potentially dangerous leaks with **thermal technology**. If staff in the area needs to be alerted, a warning can be sent via **horn speakers**.

Blocked exit notification

Ensure evacuation paths stay clear using a **visual camera** with intelligent **analytics** to detect objects blocking emergency exits or other evacuation areas. Send pre-recorded or live correctional messages via **horn speakers**.

Be prepared for any situation as our network solutions assist in emergency management, mitigate immediate risks, and evaluate health and safety procedures. Safeguard human lives and ensure uninterrupted business operations with Axis Network Solutions and Teleco — your trusted partners in comprehensive safety and security.

Choose Team Teleco for innovative solutions and unparalleled support for your technology needs.

Key Features of Teleco's Tech Solutions:

Security Surveillance and Access Control

Business Phone Systems – Cloud, VoIP, and On-premise

Managed IT & Cybersecurity Solutions

AV Solutions

Structured Data Cabling

TELECO
Integrating Technologies

Teleco, your trusted Managed Technology Service Provider in Thunder Bay and Northwestern Ontario since 1985, is also a Gold Partner with Axis Communications. By choosing us, you not only benefit from our Gold Partner status but also gain access to certified data cabling and IT experts, amplifying the strength of your professional security surveillance and access control solutions.

Experience unparalleled security with our exclusive CamCare Partner Plan. Our quarterly and annual maintenance ensures your system's seamless functionality, rapid issue resolution, and enhanced asset protection. From automatic alerts to comprehensive testing and updates, our meticulous care distinguishes us, offering unmatched support for a worry-free security experience.

For personalized security support, turn to our CamCare Concierge Service – meticulously tailored for businesses seeking top-tier assistance. Beyond quarterly and annual maintenance, our expert technicians handle incident footage retrieval, user management, and ongoing support, allowing you to focus on your business. Elevate your security experience with more than just hardware – trust Teleco for worry-free protection.

Choose Team Teleco for innovative solutions and unparalleled support for your technology needs.
